Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims refer to elements 12 and 14 as "first shaft" and "second shaft". This terminology is found to be misdescriptive. In Figure 2A elements 12 and 14 are apertures and not shafts.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Gardner.

In Gardner at Figure 6 and 10 a flexible plastic strap 50 (column 4, line 25) has I-shaped and circular apertures disclosed. The intended use of the flexible apertured strap has not been accorded any patentable weight. In any case, the flexible apertured strap of Gardner is capable of performing the recited intended use; ie., a jack having an I-beam and a cylindrical shaped handle could be found that could mate with the apertures of the Gardner strap.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, and 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gardner.

Size considerations are ordinarily of no patentable significance. The size chosen for the apertures in the Gardner strap is no more than an obvious matter of design choice absent a showing of criticality for this feature. Apparently the sizes chosen for the apertures in Gardner may be any size desired. It is disclosed that the strap of Gardner may be made of "plastic material". The examiner takes Official Notice that "urethane" is a common plastic material. Accordingly, to make the strap of Gardner from urethane would have been obvious inasmuch as urethane is a commonly available plastic material used in manufactured products.
